Panopto Session Views Dashboards

Version: 0.2.0

Summary

The **Panopto Session Views Dashboards** are designed to provide faculty members with an overview of viewing activity in their Panopto videos. This workbook includes two views **COURSE OVERVIEW** and **SESSION OVERVIEW** which offer course-level and session-level visualizations respectively.

Getting Started

To begin, please ensure you are connected to the UBC network (via VPN if remote). After connecting, you'll be able to access a specific workbook with your course data on Tableau Server <https://reports.sauder.ubc.ca/>.

GREG - [COMM 290](#)

RAJESH: - [COMM 293](#)

Once you have opened the notebook, we recommend starting with the **COURSE OVERVIEW**, then jumping into finer details for sessions of interest.

You can navigate between the two dashboards via the tabs at the top of the page. Alternatively, while in the **COURSE OVERVIEW** dashboard, you can select a video of interest and automatically be taken to the **SESSION OVERVIEW** dashboard with that video selected.

COURSE OVERVIEW

The **COURSE OVERVIEW** dashboard displays a grid, each cell representing a session in the given course folder. For each session, the following properties will be visible:

- **Session Name:** session title on panopto
- **Total Unique Views:** count of unique viewers who have accessed the video
- **Total Viewing Time:** the total amount of time spent watching the video across all viewers

Clicking on a cell will open the **SESSION OVERVIEW** dashboard with that course selected. In other words, click for more detailed viewing info about a session.

SESSION OVERVIEW
